

THEORY CLASS PRACTICAL SESSION hands on DEMONSTRATIVE live clinical case

a course aimed at dental surgeons who seek to improve different direct restorative strategies in composite resin.

FROM DOCUMENTATION, TO PLANNING, TO EXECUTION.

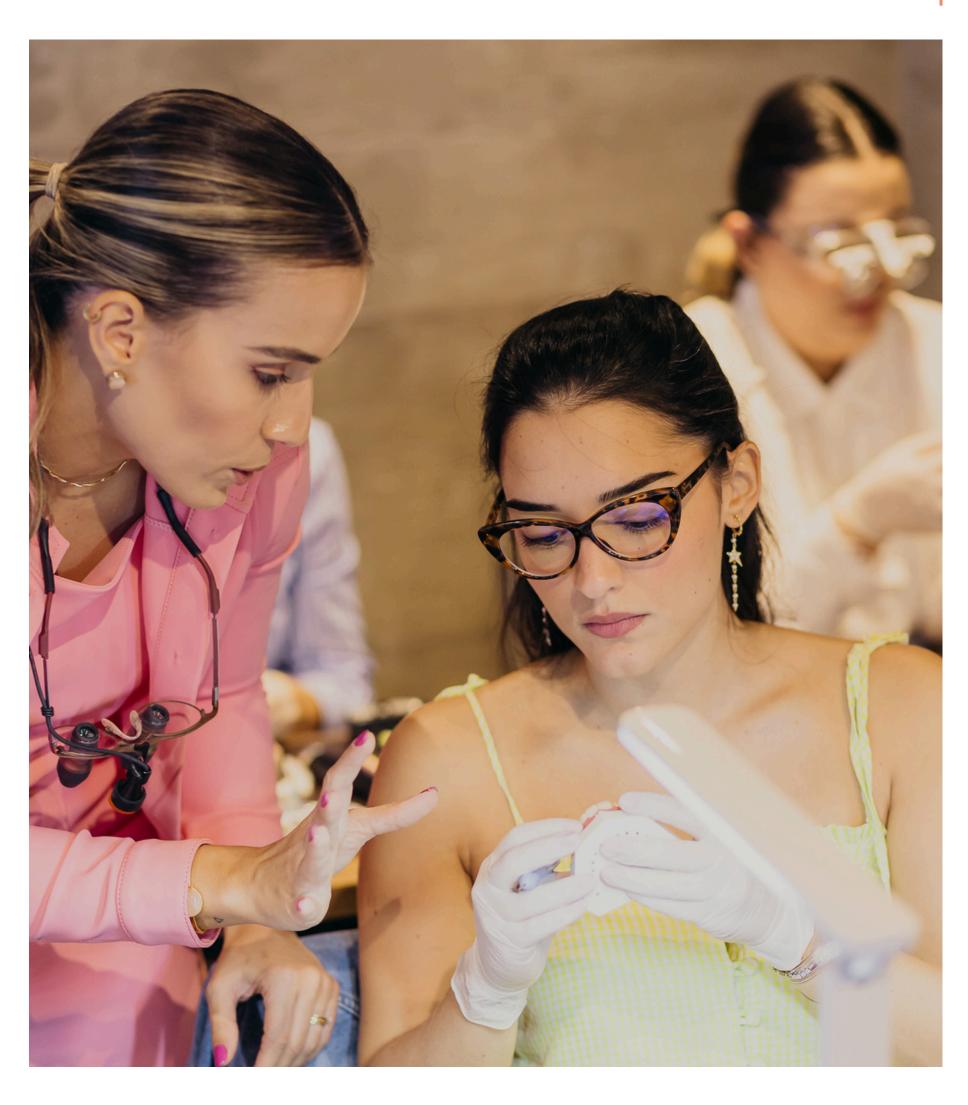

estrategic

course objective

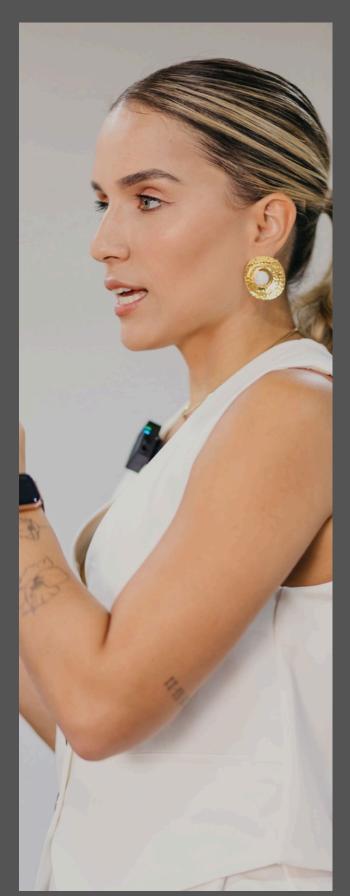

to enable students to perform direct aesthetic restorations in composite resin in a simple and didactic way, so that it can be easily reproduced in the daily clinical routine, understanding the different restorative strategies in anterior teeth:

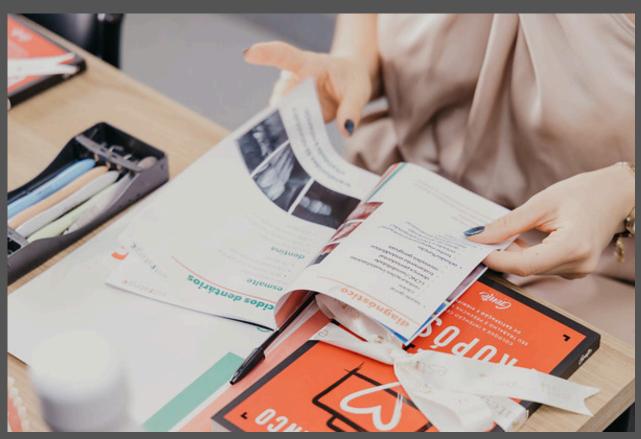

veneers aesthetic recontours composite strategic additions

programmatic content

anatomy and optical characteristics of anterior teeth

types of resins and their indications

layering sequence with different restorative strategies

freehand technique and silicone guide technique

absolute isolation

adhesion

photoactivation

analysis of the aesthetic principles of the smile

planning and photographic protocol

finishing and texturing

final polishing sequence

programmatic content

direct composite restoration using different strategies:

direct venner

conoid lateral incisor

composite recontouring

finishing and polishing sequence (primary anatomy adjustments,

secondary and tertiary - grooves and textures).

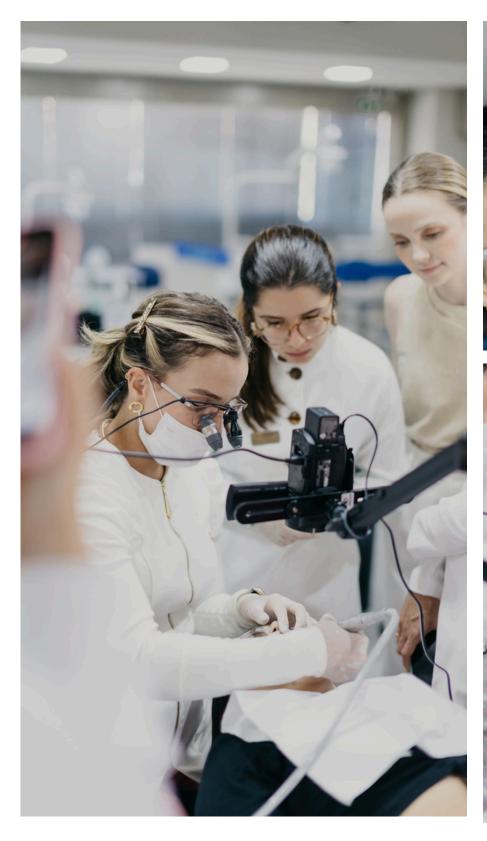

Pands of

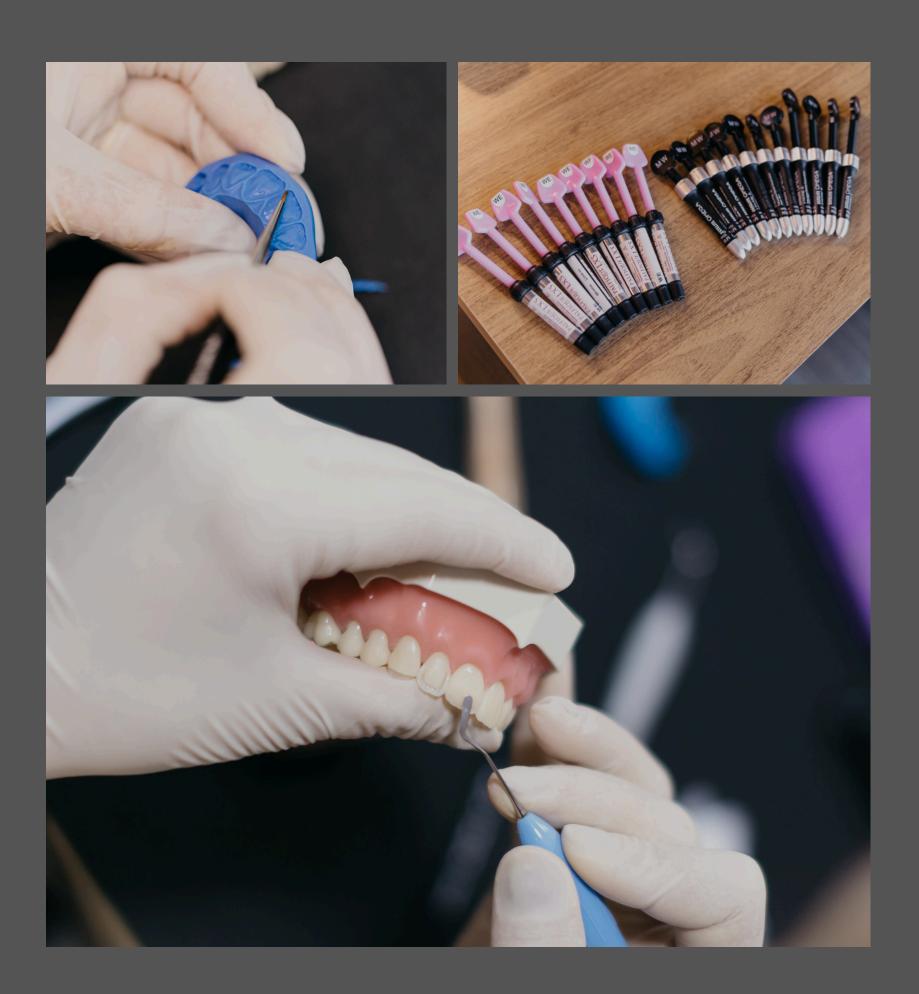

programmatic content

anterior composite resin;
photographic protocol for planning;
absolute isolation;
choice of composite resin and
color selection;
stratification;
finishing and finishing protocol.

materials

All instruments and consumables will be made available for use in the course, with the exception of:

Contra Angle Low Speed Handpiece (with <u>Steel Adapter for High Speed Drills</u>) light curing

ioptional: multiplier contra-angle 1:5

These materials must be brought by students.

For those who use a magnifying glass, it's a good idea to bring it!
